

Things You Should Know

...about **DMX**, **Art-Net**, **Streaming ACN**, and **RDM**!

DID YOU KNOW?!

XLR stands for “Cannon **X** Connector, with **L**atch and **R**ubber Guard”

Art-Net and **Streaming ACN**...
is just DMX over Ethernet!

DMX logic **still** applies, Universes are **still** 512 bytes each.

Each “byte” of the **512 available control slots** in a **universe** can have a value from **0** to **255** (256 potential values)

A Very Brief Background of DMX

USITT developed the DMX512 protocol back in 1986, made significant edits in 1990.

ESTA worked DMX512 into an ANSI standard in 2004.

Art-Net 1 was created by Artistic License Holdings, Ltd in 1998 (40 Univ), **Art-Net 2** in 2004 (256 Univ), and **Art-Net 3** in 2011 (32,768 Univ).

ACN (ANSI E1.17-2010) or **Architecture for Control Networks**, is a protocol for unidirectional lighting communication. This standard is managed by **ESTA**. The DMX version, **Streaming ACN** (ANSI 1.31), allows DMX to be sent over UDP/IP networks by wrapping a DMX frame in an ACN header. Streaming ACN supports **63999** potential universes!

When addressing Art-Net devices with an IP address, always use a **2.X.Y.Z** or a **10.X.Y.Z** IP address. This is how Art-Net is most happy! For example, **2.0.0.1** is a great place to start with your lighting console!

Art-Net uses **2.X.Y.Z** as its primary IP address scheme, and **10.X.Y.Z** addresses as a secondary.

In Art-Net, there are 32,768 possible places to send a DMX frame, called a Port-Address - a 15-digit number made up of the **Net** + **Sub-Net** + **Universe**.

There are 128 total **Nets**:
128 Nets * **256 Sub-Nets** = **32,768** potential places

Net: 256 consecutive **Universes** (or 16 **Sub-Nets**)
Sub-Net: 16 consecutive **Universes** (8,192 channels)
Universe: 512 consecutive channels

RDM, or **Remote Device Management**, sits on top of DMX data, and allows for 2-way communication of devices and controllers. RDM allows controllers to send **GET** and **SET** messages to devices it sees, like:

Get|Set **DEVICE_LABEL** (gets/sets the device's name)
Get|Set **DMX_START_ADDRESS** (gets/sets DMX address)
Get|Set **DMX_PERSONALITY** (gets/sets personality)
Get **LAMP_HOURS** (asks for lamp hours)

NOTE: All devices have unique RDM IDs

XLR5 Pinout for DMX512-A

PIN	WIRE	SIGNAL
1	Shield Drain	Ground, 0V
2	Inner Conductor (Black)	Data 1 -
3	Inner Conductor (White)	Data 1 +
4	Inner Conductor (Green)	Data 2 - (Spare)
5	Inner Conductor (Red)	Data 2 + (Spare)

Colors of internal conductors may vary by manufacturer

RJ-45 Connector

Viewed from gold contact side

RJ45 Pinout for DMX512-A

PIN	WIRE	SIGNAL
8	Brown	0V Data 2 Common*
7	Brown/White	0V Data 1 Common*
4	Blue	Not Used, PoE, typ.
5	Blue/White	Not Used, PoE, typ.
6	Green	DMX 2 Data -
3	Green/White	DMX 2 Data +
2	Orange	DMX 1 Data -
1	Orange/White	DMX 1 Data +

Pin numbering and color in accordance with ANSI/TIA/EIA-568 scheme T568B - Double check with your manufacturer.

*Pins 7 & 8 are often connected together; especially when adapting to the 5 pin XLR

Need a **DMX Terminator**?

Solder a 0.5W or larger **120Ω resistor** across **pins 2 & 3** in a plug XLR5!

Unicast, Broadcast, and Multicast

The 3 Ways of Sending DMX Over Ethernet

UNICAST

Unicast messages are sent over the network from the controller to exactly one device, individually. Multiple devices require multiple messages.

BROADCAST

Broadcast messages are sent over the network from the controller to all devices on the network. Every device processes the message, even if it's not for that device.

MULTICAST

Multicast messages are like Broadcast messages in a way, except a single message is sent over the network from the controller to logical groups of devices on the network. Devices can be addressed to listen to these group messages.

DMX DO:

DO's & DON'Ts

to save **your** load-in day!

Always have **DMX terminators** on hand, and use them.
Any time you have multiple DMX lines, **use a repeater**.
Always **optically isolate outdoor fixtures** from console.
Always use approved **digital signal cable** for DMX!
Always use 5 Pin XLRs for DMX portable cable

DON'T:

Don't use a **DMX "two-fer" or Y-cable**. It can distort the signal.
Don't use **mic cable** for DMX. Wrong impedance & conductor.
Don't **solder DMX cables** together.
Don't go **over 1500'** when using DMX and proper cabling (suggested)
Don't talk DMX to **dangerous devices** like pyro, cryo, rigging.
Devices using 3 pin XLRs may work but are NOT COMPLIANT
Don't add more than 32 fixtures on a single DMX run out repeater!
